Makarov A.N. Localization of industrial and technical production in the region territory as a tendency of import substitution

Enhancing import for domestic enterprises for industrial purposes affects the economic security of both Russia and its regions. One way to reduce dependence on import of enterprises and economic activities in the region is the organization of import substitution. In order to produce import analogous products it is offered to attract strategic foreign partners in the form of localized organizing production in the region. It is considered the criteria of a promising role in the localization of import substitution in the region. It is concluded that the localized production can solve the problem of dependence on import of enterprises and economic activities of regional industry to ITP with the simultaneous development of the region's productive potential.

Key words: industrial and technical production (ITP), import dependency, import substitution, localization, competency, export-oriented production.
