

PHILOSOPHY
(specialty 09.00.13)

Rezhabek E. Ya. Predisciplinary culture science knowledge – one of the premises of philosophy formation

It is considered the historical succession between different forms of cultural reflection. The analysis of consciousness phylogenesis proves that myth and poetic regulative of culture had been reflected earlier than Logos. Consequently, culture science is more ancient than philosophy. Culture science knowledge started with value transcendental orientations reflected in sense and affective images of heroes, demons, idols and also presentation of their deeds. World outlook settings of myth consciousness and philosophy determined the whole cognitive structure of culture of the correspondent epoch and finally formed models of social and historical behavior of people. Only in modernism epoch there appears disciplinary culture science knowledge taking into account science and organization empiric investigations.

Key words: transcendental senses, world outlook settings, myth construction, sympractical culture, asympractical culture, rational and analytical models.
