Zezulko A.V. Science-and-technical progress: reflection in Russian culture of the XIXth century

The article is devoted to the problem of science and technology criticism in Russian culture – philosophy and culture of the XIXth century. The author underlines that according to Russian philosophers progress in science can lead to the ruin of the principles on which it is based. Thus the cognition of the existence is reached only through unification of science and theology that is the initial way of the search of answers on the most vital problems by a person. Science, according to Russian philosophers of the XIXth century, is only one of the aspects of the authentic knowledge.

Key words: human culture, contradictions of science-and-technical progress, Russian authors, Russian philosophers, science criticism, destructive influence of the knowledge.
