Shulman M.M. Personal basis of impersonal scientific knowledge

Development of opposition of personal and impersonal scientific knowledge in connection with possibilities of various application of the knowledge received by a science is reconstructed. Event of an increment of scientific knowledge is considered as personal action. Samples of such actions are their personal bases. The learnt set of certain quantity of the facts, - yet not working knowledge. The personal, individual, private knowledge is always more real impersonal, objective because only the personal knowledge is started up by the person in a turn, is used and thus is structured and develops. For various scopes of application of knowledge various ways are required not only to transfer impersonal scientific knowledge to new generations, but to transform impersonal scientific knowledge into knowledge personal.

Keywords: knowledge, personal knowledge, impersonal knowledge, generation.
