### ***Solovyeva E.V. On the question of the necessity to model the process of formation of universal academic skills of students***

Now updating of a competence approach to education forces shows consideration for a problem of formation of universal educational abilities (further UEA) in the conditions of development and acceptance of new Federal State Educational standards of the second generation. It is necessary to pay attention to the problem of formation of UEA. The structural and logic model of formation of universal abilities of school students assumes a close combination of intersubject communications in the course of school training. The contents of the intersubject communications is defined by the maintenance of the training material, formed skills, abilities and cogitative operations. Let's consider in this regard classification of intersubject communications as the correct classification, displaying regularities of development of classified concepts, deeply opens communications between them, promotes creation of scientific and practical preconditions for realization of these communications in educational process.

Keywords: competence approach, Educational universal abilities (UEA), Structural and logic model, Educational process, intersubject communications, system of educational tasks, each lesson thematic planning, obligatory level
