***Kopelchuk S.Ju. Issues of scientific supply of government programs realization in engineering***

Economic growth and penetration in Russia, modernization of industries require huge investments. There should be a significant increase in the share of private investment. These issues in the article are identified as the most important in ensuring the growth of the national economy. It states that the practice of investment remains of extremely high dependence on governmental bodies, including the various services of the state customers who interact with private investors. How effectively the customer can assign tasks to each other and the private investor, will ultimately determine the investment attractiveness of the building for private entities. In this regard, the paper suggests specific areas for optimization of the customer and based on the study of foreign experience provides recommendations to revitalize the research organizations that can offer the necessary means, mechanisms and tools.

Key words: state investment, development, construction, economy.
