Sirotkin A.S. Mechanisms of financing of infrastructural projects of utilities economy

On the basis of the isolation of the total water supply risks of global risks, the article describes some ways to reform water utilities of Russia by developing innovative mechanisms to raise additional funds in the industry. Principles outlined in the paper of formation and implementation of public financial and tariff policy, the proposed financial arrangements of the water industry in Russia will significantly reduce the risks of a global resource and ensure the normal functioning of not only the water industry, but also allow to generate optimal mechanisms for financing and implementation of projects and programs in a wide range of infrastructure sectors of the national economy.

Key words: water utilities, finance infrastructure projects, the tariff policy.
