Kopelchuk S. Yu. Capital investments. Problems and contradictions

The problem of investment in the Russian economy is relevant for many years. The growth, which was recorded in 2000-2008 did not allow to provide long-term economic development. Fundamental conditions for investment activity has been established. The flow of foreign investment, the country needs, was only temporary, based on the accumulation of resources for the period in excess of the high prices for natural resources. Economic research in Russia shows that capital-intensive industries, albeit slowly, but increase growth after the crisis of 2008. At the same time, a more in-depth studies that take into account both direct and indirect effects on committing economic growth show that in many ways, the growth of one area is due to the irreversible utilization of other areas. This is example of the development of housing at low investment in infrastructure, as well as others, providing the groundwork for new construction. In fact, the country's trade creates assets that dominate the production of the assets.

Key words: state investment, infrastructure development, construction, economy.
