Evdokimov S.A. Prospects of development of regional economic models of diffusion evaluation for innovative goods-complement

Prospects of development for Regional Economic models of evaluation of the innovative complement goods diffusion in monopolistic completion environment creation is based on the fact of having some unsolved scientific critical issues: absence of regional economic model of innovation evaluation that takes into consideration regional economic peculiarities (indexes of the region's economic growth, region resource provision for innovation manufacturing and also indexes that characterize government and local authority priorities to region's development); absence of the innovation diffusion model that considerate market type of the new product promotion; absence of the innovative good complement evaluation diffusion model. Therefore there is a gap in the development for Regional Economic models of evaluation of the innovative complement goods diffusion. Thereby all future models will contribute to regional economics science as well as innovations diffusion evaluation models.

Key words: regional economic model of evaluation of the innovative complement good, innovation diffusion model, regional economy, innovations, innovation diffusion, complement goods, innovation ratio, imitation ratio, poor achiever – leader effect, simultaneity effect.
