Kostin I.V. Staff supply for innovative projects realization in the region

This article is an overview of staffing problems under investment projects realization in the regions of Russia. It is noted that investments carried out in regions cause need for highly qualified specialists whose regions cannot provide in many cases. Existing regional education system is not ready to conduct training of specialists whom investors need. Recruitment agencies, employment centers cannot solve a staffing problem. In this regard, for satisfaction of investors' needs in staff regions there are different decisions. As a whole, the developed system of staffing cannot meet increasing requirements to quality and skill level of the experts following from innovative nature of investment project realization. For solution of these problems the author in article offers realization of the package of measures on development of educational network integrated with the enterprises and the organizations promoting the solution of staffing questions for the investment sphere.

Key words: staffing, labor potential, employment, unemployment, staff disbalance, educational institutions.
