***Mouratov A.S. “Genome” development of a sample organization: harmonization approach***

Development of an idealized image of the universal organization is presented in the article on the basis of the evolutionary and genetic theory of development of social and economic systems. This theory investigates mainly stages of life cycle of the organizations, variability of their properties under the influence of environment, adaptation of the organizations to new conditions. To basic properties of the organization (heredity in economy) attention is not paid though they underlie harmonious development of the organizations. It is proved that quantitative changes in evolution of the concept of a sustainable development of economy resulted in new quality – the concept of harmonious development. The contents and conditions of harmonious development of the organizations is opened.

Key words: heredity, variability, harmony, evolution, genetics, genome, sample, organization.
