Dementieva I.V. Pedagogical terms of formation of research competence of students in educational space of school

The conditions for the formation of the project and research competence in the educational area of the school are determined, first of all, by the provision of the project and research directionality of the content of education, by the need of the immersion of students in the project and research environment, by personal priorities and motivation of the students themselves, and finally, the creation of the conditions for the development of the scientific and teaching skills of teachers for a more successful experience in transfer of project and research activities from the teacher to the student.

Key words: pedagogical conditions, the complex of pedagogical conditions, motive, project and research activities, educational area, pedagogical technology.
