Axiology as pre-paradigm science: antiquity period

It is considered the development of reconstruction axiology in the ancient period and proves it is not a paradigmatic character. European philosophy began with the identification of complete or relative being and welfare. In studies of Antiquity agatology all system features of axiological paradigm are not observed, but the individual components of axiological paradigm in different interpretations are presented in some agatology theories. As an example, the development of valuable ideas in antiquity the article examines the construction of Heraclitus, Protagoras, Socrates, Plato, Aristotle, and representatives of Stoicism.

Key words: value, axiology, paradigm, methodology axiology, philosophy of antiquity, doctrine of the good, agatology, not the paradigm science.
