Social capital in the context of post-nonclassical approach

The article deals with the structure of social capital based on the model of the minimal universum, investigated by Nemirovskiy V.G. The research shows the way to observe and analyze the structure of social capital in connection with the definite organizational society levels. The first level is correlated with the volume of social relations between atomized actors considered as a resource of the collective or individual action. The functional level consists of the volume of trust, which is the consequence of socialization success and the stage of social institution development. The informational level of social development is based on the way the dichotomies between individuality and collectivity, freedom and system correlation are considered as a synthesis, developing in various and innovative forms of social relations and actions. The informational level is the level of norms and values orientations, which are formed and developed with the help of free and involved participation in organizations, based on the democracy and social system principles.

Key words social capital, information society, trust, volunteer organizations.
