Intentions models in the language

The analysis of the researches conducted in Russian and foreign linguistics of the main types and properties of models of intensions allows to allocate such characteristics of them as: effectiveness which provides that when modeling intensions it is necessary to differentiate the planned actions and the planned results; first priority which, considering not identity of intension and direct action, assumes their serial updating, with priority of intension; configuration; interaction; aiming at recognition; community; division; degree of structure; complementarity; conventionality, etc. The list of characteristics of intensions can be expanded and added, however the characteristics specified in the article represent a description kernel of the described processes.

Key words: intension, perspective loan, dialogical model, interaction, conventionality.
