### **Some aspects of modernization of DSTU education activity as a basic university**

The reference is to the University of Rostov region DSTU - multidisciplinary research and education center, which is the implementation of a campus model of a new type of educational institution. Development of the system of continuing education at the expense of expansion of cooperation of schools and the university, and promote the network of additional education programs for all age groups. On the basis of DSTU create a single regional center of innovation development of the Rostov region, which should be due to the concentration of intellectual potential of the region and intergatsii science, education and industry to effectively meet the challenges of social and economic development of the region. At the same time the decisive factors are the introduction of industry and the formation of new and innovative information technologies and high-tech training of highly educated professionals capable of developing and using such technologies.

Key words: DSTU, education activity, campus model, innovative development.
