The study of the semantic relations in the German language vocabulary on the valency bases

It is described the approaches to the study of the semantic relationships in the German language vocabulary. It is considered the problem of valence and compatibility as the mechanism for systematic studies of lexical units. Considering the complex nature of valence the authors describe its different levels and types and outlines their practical application for the analysis of the semantic structure of the lexical and grammatical class of adjectives.

Key words: systemic relations in the vocabulary, semantic structure of words, lexical-semantic group, valence, compatibility, levels of the valence, logical and semantic valence, syntactic valence, lexical and semantic valence.
