Syntactics of grammatical category of case

The article describes the essential features and functions of case grammatical categories depending on their typological characteristics. It is analyzed theoretical provisions of modern Linguistics and historical approaches to the study of grammatical categories of case, while grammatical form properties are analysed in unity with its lexical value. It is highlighted their shortcomings in relation to the syntactic component grammatical categories of case and presented the main directions of modern researches of syntactic. It is shown that a full analysis of the grammatical category is impossible without considering syntax construct statements. On the basis of theoretical and practical study argues that morphological analysis semantics may not be accurate without considering all these rules.

Key words: semantics, syntactics, grammatical category, position dependence, case.
