

PEDAGOGY

Yulia Z. Bogdanova

(State agrarian university of Northern Transurals. Tyumen, Russian Federation)

On the change of the tradition of upbringing work at higher school

Traditional education significantly lost its position in recent decades. The experience of the educational process, created in pre-Soviet Russia, suggested an appeal to the values of a religious nature, the conditions of perception of patriotic values and ensuring moral and ethical approaches to the formation of the student's personality. The paradigm of the Soviet higher education also allowed to integrate the educational segment in the preparation of higher school specialists: social activities, joint work and creativity, social guidelines and patriotism became an integral part of the educational process. In modern conditions, the educational system of the university actively restores the conditions of extracurricular pedagogical influence, while using existing domestic experience and integrating foreign practices into the system of education of students.

Key words: educational process, information society, value orientations, training of specialists, moral and ethical values, etc.
