### **Relevancy and prospects of implementation of dual education in vocational educational institutions**

It is stated that the strategic direction of economic development of the Stavropol territory involves changes in the system of vocational education. A key trend aimed at ensuring the quality of training for various sectors of the economy is a practice-oriented approach in the system of vocational education. It is noted that it will be necessary to adjust the system of actions not only at the heads of professional educational organizations and institutions, but also the teaching staff. The article describes the dual training, which is, first of all, a system of training of highly qualified, practice-oriented specialists who have acquired theoretical knowledge in the classroom, and directly in the manufacturing enterprises, that is, in future jobs have practical knowledge. Introducing elements of dual training, educational organizations will contribute to the training of qualified personnel in line with practice-orientation, technologization, and the development and implementation of educational programs using elements of dual training will be a powerful factor in improving the content and quality of training of students, in accordance with the requirements of the regional labor market.

*Key words:* economic development, system of professional education, quality of training, dual training, labor market.
