### **Tolerance as the factor of modern world stabilization**

The development of the modern world is determined by two opposing trends – integration and disintegration. The first one contains immanently tolerance as the main condition for a constructive dialogue of social and cultural subjects of various modalities. The second is manifested in increasing political tensions and increasing worldview and military conflicts. Under these conditions, it is important to determine: can tolerance be the most effective mechanism for achieving a humane existence in a globalizing world? To this end, the authors are trying to determine the object of tolerance – intolerance from the standpoint of existential and rational-logical analysis.

Key words: tolerance, intolerance, globalization, multiculturalism, the object of tolerance – intolerance, measure as a criterion of tolerance, tolerance as a value and as a legal norm.
