The value of reflexive skills in the development of students' creative activity

The article shows the importance of forming reflexive skills and their connection with the development of creative activity of students in the process of their independent work. Independent work, in particular, solving educational tasks that simulate situations of professional activity, requiring the ability to identify problems and determine the most rational ways to solve them, that is, to apply the acquired knowledge in practice, stimulates the development of creative activity of the individual. The article also analyzes the concepts of "creativity", "reflection", "reflexive skills", "independent work", and provides examples of the classification of creative activity. Based on the analysis of scientific and practical research of scientists and their own developments, the author of the article concludes about the importance of reflection in the development of creative activity, which allows the individual to plan the trajectory of professional and creative self-development.

Key words: reflection, reflexive skills, creative activity, classifications of creative activity, students, independence, professional self-awareness, professional motivation.
