On the implementation of the principle of interpretation in the modern political detective

It is considered the implementation of the principle of interpretation in the modern political detective. This topic continues to cause controversy in scientific circles about the definition of its contradictory nature, on the one hand, proving its necessity by the impossibility of the existence of real facts without their interpretation, and, on the other hand, determining its role by creating fictitious meanings that suppress the semantic basis of reality. Therefore, the study of the principle of interpretation in political detectives, which emphasizes the comprehension of the nature of the literary text, the relationship between the true facts in it and the interpretation of realities by the author, is considered as promising and having great potential, in particular both to highlight clearer criteria of the genre under consideration and establish its linguistic and pragmatic features.

Key words: principle of interpretation, detective genre, political detective, assessment, completion, selectivity, concealment.
