### **Informational learning environment as a means of forming foreign language professional competence of a future foreign language teacher**

It is considered the problem related to the formation of a foreign language professional competence of a future foreign language teacher using an information learning environment. According to the author, informatization is a natural reaction of the education system to changes in the information environment of modern society, to the introduction of new ways of transmitting information into everyday life. The author focuses on mobile applications, the use of which in the process of teaching a foreign language is aimed at interactive interaction of students both with each other and with the teacher, including the course of written works, which in turn is effective for improving the overall level of foreign language proficiency and developing writing and speaking skills.

Key words: foreign language professional competence, mobile applications, language skills, speech skills, informatization.
