Social and philosophic analysis of social security

It is justified that the topic of security is now one of the most popular and widespread at all levels of government and social development. Context, the most diverse is used here: national security, state security, spiritual security, cultural security, economic security, personal security. It is no coincidence, because the very idea of safety has remained relevant since the advent of man as a biological species, since the dangers threatened the «reasonable person» always and everywhere. In this regard, the socio-philosophical nature of the origin of the concept of security itself should be clarified.

Key words: personality, society, culture, spirituality, morality, law, public consciousness.
