Ways to express attributive clauses

Linguists have expressed conflicting opinions on the presence or absence of hypotaxis in the mountain Iberian-Caucasian languages. To date, there is no unequivocal decision on this issue among the Caucasian scholars. In our article, we tried to reflect the existing points of view of many Caucasian scholars and offered our own vision of the problem. In the Chechen literary language, we have all the necessary signs of a subordinate clause: both the means of syntactic communication, and the form of the predicate inherent in a simple sentence. Subordinate clauses can be selected and used independently as a simple clause. Of course, in a wide variety, as in languages with developed hypotaxis, attributive clauses are not used in the Chechen language. However, under certain conditions, they take place. This is evidenced by the examples and their syntactic analysis.

Key words: hypotaxis, Chechen language, subordinate clause.
