Pedagogical technique in the professional activity of a teacher

It is justified that often violations of pedagogical standards of behavior are associated with insufficient teacher training. Elements of pedagogical technology are: the art of communication, the ability of the teacher to manage mental states; a sense of pace in pedagogical actions; techniques of expressive display of subjective attitude to certain actions of trainees or manifestations of moral qualities; possession of speech culture (diction, intonation, orphoepeia), production of proper breathing, voice staging; possession of facial expressions, tween gestures. According to the authors, practice confirms that there are still no shortcomings of the technical order in the teacher's work, which, of course, has a negative effect on the content of professional activities. Although technology in the pedagogical process performs only an official role, one cannot but agree that the art of mastering the technique of one's business allows you to achieve great success with less effort and energy.

Key words: professional skill, pedagogical activity, consciousness, thinking, speech equipment, personality, training, education.
