### **Features of the creation and functioning of an electronic dictionary of terminological vocabulary**

The purpose of the study is to determine the principles of compilation and functioning of an electronic dictionary of terminological vocabulary on the basis of the figure skating terminology system. The article describes the process of working on this dictionary. When compiling the codes of figure skating terms, the indexing of terminological units was carried out taking into account the logical connections between them, the systematization of code designations was carried out, showing a strictly defined location of the term and giving its full characteristics. The scientific novelty of the work lies in the mechanism of encoding the relevant information, compiling its code designations. The article describes the process of modeling the system of relationships of terminological units, analyzes the structure of these relationships. As a result, it is shown that the entire information flow can be encoded using numbers.

**Key words:** electronic dictionary, code, term, term system, classification scheme, genus-species relations, partitive relations.
