Virtual reality: benefits and risks

It is considered the problem of virtuality and its place in the modern world. Since modern society is developing extremely intensively, therefore, a typical situation is when a radical change that has formed does not have a proper reflection at the level of research literature. One of such areas in which there have been drastic changes is computer technology. The main object of research is the activity associated with the use of virtual technologies. The subject of the study is the social and technical aspect of virtuality. In the course of the work, it is proved that at the current stage of development, virtual reality carries both positive opportunities and significant risks.

Key words: technologies, computer technologies, virtuality, virtual reality, information environment.
