On the issue of translation training in scientific and technical texts on a distance learning basis

In the present world, distance learning has become an indisputable aid for higher education, as well as for secondary and primary education. Foreign language learning is an important factor in the development of an individual's professional life. The Covid-19 pandemic has given an impetus to the development of distance learning and the development of online courses. We have developed online courses for teaching technical and scientific translation to university students. The research paper presents the study of achieving positive results in the implementation of online courses in the learning process at the Don state technical university, conducted with first year full-time students in the field of landscape design. The purpose of our study is due to the relevance of the introduction of distance courses in the pedagogical process, as well as limitations due to the pandemic Covid-19. The experiment is a new way to update the educational process. The methodology of our research was to turn to Russian and Western academics, to study scientific works and publications in order to explore our task in more detail. In the course of the study, the results have been achieved and conclusions for further work have been drawn.

Key words: training, translation, technical text, scientific text, English, Russian, distance learning.
