Language means of the manifestation of androcentrism in modern English-language phraseology

It is identified the features of gender-marked English idioms in order to determine the gender stereotypes of the English, reflected in the phraseological foundation of the language. The scientific novelty of the study is the comparison of idioms with components of men and women considered from a cultural point of view. The result of the study is an analysis of gender-marked phraseological units of the English language with their further systematization according to semantic centers, semantic characteristics, as well as the separation of positive and negative aspects of men and women reflected in idiomatic constructions of the English language.

Key words: English, idiomatic constructions, gender-marked idioms, androcentrism, masculinity.
