

## PHILOSOPHY

*Eduard B. Savenkov*

*(Samara state technical university, Samara, Russian Federation)*

### **Non-metaphorical existence of ecosystems in the sociotechnical picture of the world**

The article has a programmatic character and sets promising directions for the ontological understanding of ecosystems. It is underlined a differentiated approach to the consideration of the process of transferring experience from one subject environment to another. On the example of banking, the problematic areas of the development of philosophical knowledge in the field of sustainable development are actualized. An ideal model of ecosystem interaction is schematically presented. Promising directions of research on the axiological foundations of being are proposed.

**Key words:** ontology, theory of knowledge, sustainable development, axiology, ecosystem.
