### **Peculiarities of the lexical units on the example of the professionally-oriented topics "Chemical laboratory", "At the Chemist's"**

It is considered the features of lexical units studied by students of non-linguistic university of pharmaceutical and medical faculties. The purpose of this study is to study the features of lexical units on professionally-oriented topics "Chemical laboratory", "At the Chemist's". The following methods are used: empirical experience, observation and the method of analysis aimed at identifying the features of the formation of singular and plural forms of nouns of a professionally-oriented nature. As a result of an experimental study aimed at analyzing lexical units on the topics "Chemical Laboratory", "At the Chemist's", it was found that special vocabulary on the above-mentioned topics is a word-formation difficulty while working with different texts in the field of medicine and pharmacy. Along with it, the study presented special cases related to the grammatical feature of complex nouns plural formation in the field of medicine. Complex lexical units on the above topics were considered and analyzed, which present some difficulties in education and the use of abbreviated forms.

**Key words:** professional vocabulary, lexical units, medical texts, professional topics, non-linguistic university, medical community, international cooperation.
