"Fundamentals of religious culture and secular ethics" in modern comprehensive school and the problems of secularity in education

Since 2012, the restoration of religious and moral education in the Russian comprehensive school (at the choice of the student's family) forms the sphere of joint competence of the state and confession. The correlation of secular and religious as the ideological basis of modern school education is considered. Taking into account the analysis of the practice of teaching the course in the conditions of a multi-confessional and multi-ethnic region, which is the Republic of Dagestan, the authors attempt to build a model that is emerging in the schools of the republic as a result of the activities of religious and educational organizations.

Key words: state, spiritual and moral education, confession, Islam, Orthodoxy, Buddhism, religion, people, nation.
