Integration of pedagogical technologies into education process

It is discussed the advantages of pedagogical technologies and the features of their implementation in the educational process. The integration of a conscious, student-oriented, most effective approach to the student allows the teacher to show the full range of their professional knowledge and skills, improve the results of the educational process, make it interesting and rich for all subjects. On the other hand, the use of pedagogical technologies increases the requirements for the teacher, strengthens not only the subject aspect, but also the ability to find non-banal solutions, quickly navigate the situation and adapt to the participant in the educational process, their needs. Understanding the sequence of stages in the implementation of educational technology, both in a broad and in a detailed sequence, will make this process easier for the teacher, give him the necessary tools, which, in turn, will ensure the most effective achievement of the goal.

Key words: pedagogy, pedagogical technology, training, education, upbringing, method, device.
