Virtual reality in the world of education and training

The possibilities of virtual reality technology and their use in various fields of education and training are described. It is noted that today there are virtual technologies that expand the virtual world with additional equipment and an individual can experience a number of emotions from its impact during a virtual reality session like never before. Attention is focused on the fact that currently virtual reality technologies have advanced so much that their application in different areas of human life is a reality, and above all they are very promising in various fields of education. It is concluded that the use of virtual reality in education is promising, interesting and important.

Key words: virtual reality, education, interactive technologies, illusory world, three-dimensional modeling, learners.
