On the need to form a methodological culture of future engineering specialists

The article discusses the problem of specifying the process of forming a methodological culture due to the worldview attitudes of the future engineer. The close connection between the methodological culture and the worldview of the specialist is due to the strengthening of the role of the humanistic component in the educational process. Methodological culture allows the future specialist to realize its social significance and necessity. The article indicates the steps of the formation of a methodological specialist from literacy. These stages are the relationship of knowledge, worldview attitudes and detectivity, which is carried out precisely taking into account the above. The article also defines the methodological culture of the future engineer, describes the structural components of the system of formation of the specified personality property.

Key words: methodology, methodological culture, worldview, methodological beliefs, methodological guidelines, system of formation of methodological culture.
