Professional mobility of a teacher as an indicator of his effectiveness

The phenomenon of professional mobility has been comprehensively studied in the scientific literature from the point of view of its direct realization by the addressee, which is explained by its function: to teach a person to quickly navigate a changing professional field, at the same time, the personality of the one who actually forms professional mobility: the teacher often remains out of sight. The characteristics that a teacher must possess are considered in order not only to meet the requirements for pedagogical mobility himself, but also to be able to form it in students.

Key words: mobility, professional mobility, pedagogy, teacher, training, education, upbringing.
