Pedagogical technologies: the historical aspect of development research

The article argues that in the modern world, education, as a social institution, has a key role in the formation of society and the development of the individual. However, their evolution and development could not do without the use of various technologies. The history of the development of pedagogical technologies is a process, the result of which involves a constant desire to improve the processes of education and upbringing. It is closely related to social change, scientific discoveries and technological innovations of each era. The desire for continuous improvement of the educational process has become a driving force for the development and application of new approaches and methods in learning.

Key words: teaching, education, technique, knowledge, thinking, personality, society
