Actual aspects of the theory of quality of life in the context of social justice

The ambiguity of approaches to the study of the category of quality of life is revealed, due to the multidimensionality and universality of this concept, based on the empirical picture of social realities in the modern world. Contrary to this, social theory has developed many interpretations of the concept itself, which indicates the demand for its study and the need to develop a conceptual paradigm for the quality of life in the context of individuals' ideas about justice, as a requirement for the realization of their social interests and needs.

Key words: quality of life, justice, interests, needs, standard of living.
