Formation of pedagogical competence: professional aspect of development

The article justifies that professional and pedagogical competence includes five elements: social and professional competence in the field taught by the discipline; methodological competence in the field of methods of generating knowledge and skills of students; socio-psychological competence in the field of communication processes; differential psychological competence in the field of motives, abilities of students; autopsychological competence in the field of advantages and disadvantages of one's own activity and personality. According to the authors, the competence of a specialist in the field of education is becoming increasingly important due to the complexity and expansion of social experience, the emergence of more and more diverse forms of presentation and transformation of information, with an increasing level of those requests that society and students present to a specialist.

Key words: education, personality, culture, knowledge, competence, professional activities, society.
