### **Posthumanism or philosophical questions about the future of humanity and technology**

The key philosophical issues related to the posthuman condition and how technologies affect the future of humanity are discussed. The concepts of posthumanism, which presuppose the expansion of the boundaries of human existence and understanding, as well as the challenges arising from ethical, social and cultural changes, are considered. The possible interaction of man and machine, changes in the nature of human identity, and questions of how to preserve humanistic values in the context of technological progress are analyzed. Important questions are being raised about the future of social relations, responsibility for the consequences of technological innovations, and the need to rethink philosophical foundations that can help build a society capable of coping with the challenges of the posthuman era.

**Key words:** posthumanity, technology, philosophy, artificial intelligence, ethics, biotechnology, human identity, humanism, social relations, responsibility.
