Ethical issues of the use of generative artificial intelligence in the field of education

The relevance of the research topic is due to the increasing introduction of generative artificial intelligence (AI) into the field of education, which inevitably led to the problem of the ethics of its use there. The purpose of the work is to attempt to review literary and online sources devoted to the use of AI technologies in education, the benefits and risks of such use on the personal sphere of students in the context of ethical issues and to propose some recommendations on the use of AI technologies aimed at compliance with ethical standards.

Key words: generative artificial intelligence, ethical standards, principles of ethical use, protection of data privacy, risks of using generative artificial intelligence.
