On the issue of the formation of linguistic competence for full-fledged international cooperation in the field of energy efficiency and energy conservation

The language of international cooperation is considered as one of the basic components of successful international cooperation in the energy sector. Special attention is paid to the formation of linguistic competence of specialists in the energy sector to ensure full-fledged international communication in the field of energy saving and energy efficiency. Modern didactic approaches, methods of teaching English as the language of international communication for specialists in the energy sector are analyzed, as well as a systematic analysis of educational and methodological complexes in English for students studying in energy profiles is carried out. Special attention is paid to the problem of creating a terminological glossary in the energy sector and the specifics of its application to optimize communication and develop cooperation in the field of energy efficiency at the present stage.

Key words: linguistic competence, international cooperation, professionally oriented training, cooperation in the energy sector.
